

# Controlled Flight Into Terrain and Over-Reliance on Automation

An over-reliance on automation may be a precursor to a flying mishap, regardless if the flight is in daylight hours or during night flight conditions. General aviation pilots are well-advised to understand the limitations of automation and to maintain proficiency in flight operations with and without automation.

**Directions:** For those flying in, park on the ramp in front of the administration building. Those driving to the event may park in the lot south of the EAA clubhouse on the south side of the field.
