

FAAS Team Greater Chicago District presents:

Pilots And Medications

In studies published by the FAA Toxicology Laboratory, toxicology samples of deceased pilots indicated the presence of illicit drugs, and prescription or over-the-counter medications in 42% of the subjects tested. While NTSB and FAA have not necessarily cited drug or medication use as a causal factor in these accidents; the magnitude of these findings pose two questions: 1) Have the drugs found in recent investigations diminished the ability of pilots to safely conduct flight operations; and 2) Have the medical conditions requiring use of those drugs compromised the ability of pilots to fly safely? It is safe to say that a consultation with one's Aviation Medical Examiner (AME) is a good idea before flying while using any drug.

Directions: For those driving in park next to the terminal building. For those flying in, please use the ramp opposite the terminal building.
