

Drones in Public Safety

Discover how drones are revolutionizing the way first responders protect and serve our communities. In this engaging and informative presentation, Officer Dan Burch will explore the growing role of unmanned aerial systems in modern public safety operations. Learn how drones are being deployed for search and rescue missions, disaster response, traffic monitoring, and crime scene investigation. With advanced capabilities like high-resolution imaging, thermal sensors, and real-time data transmission, drones are giving agencies a powerful new perspective-enhancing situational awareness while reducing risk to personnel. As this technology continues to evolve, its impact on emergency response is only increasing. Join us to gain insight into how drones are improving decision-making, speeding up response times, and helping save lives.

All are invited to join this seminar.
