

Cincinnati Air Traffic Control Tower

presents

Operation Rain Check

Principles of Air Traffic Control

The Cincinnati Air Traffic Control Tower will present a 4 hour course in the principles of Air Traffic Control for the benefit of pilots and student pilots of this area. The purpose of the presentation is to familiarize pilots with air traffic control, its responsibilities, functions, problems, and relationships with the various facets of aviation. You will learn about ATC communications, tower operations, RADAR vectors, ATC separation standards, traffic flows at CVG, and how to use the air traffic system. In turn, we hope to receive ideas from you on how we, as a public agency, can better serve the flying public.

The presentation is free to the public and open to everyone. For more information E-mail Edward Albert at Edward.W.Albert@FAA.GOV or call (859) 372-6409.
