

Columbus FAASTeam presents:

Topic of the Month - Mountain Flying

Teaching Points: Mountain flying training from qualified, experienced instructors is essential before attempting flight in mountain environments. Training in one mountain environment does not guarantee success in a different environment. Pilots are well advised to seek training and advice from local mountain flying experts. Weather conditions can change rapidly in the mountains and escape opportunities are not as plentiful as they are in the flat lands. The Mountain Flying Power Point – provided by the Colorado Pilots' Association – acquaints pilots with the challenges of mountain flying and offers suggestions for training and additional information. It in no way prepares inexperienced pilots for flying in mountainous environments.

Directions: Lane Aviation is located on the right side as you drive toward the terminal on International Gateway. Turn right into Lane Aviation entrance, bear to right of flag pole, enter building with maroon awning (4387) over the door, walk up the stairs to second floor and room is on the left.
