

FAASTeam presents:

Pre-flight and In-flight Weather Resources Topic of the Month

The 21st Century has brought an unprecedented wealth of information to general aviation cockpits. Near real time graphical and textual weather products contribute greatly to pilot situational awareness and decision making. But pilots must understand the capabilities and limitations of the equipment and the information it provides.

Teaching Points: More pre and in-flight weather information is available than ever before but with that wealth of information comes complexity. Pilots must be comfortable with their choice of weather information services and they must be competent in making critical flight decisions based on assessments of the information provided. A thorough understanding of weather information resources capabilities and limitations is essential to safe flight. Weather information procurement and weather decision making should be covered in any proficiency training program.

Directions: Located in second floor classroom of Lane Aviation, enter under the maroon colored awning and take stairs on the right to the second floor classroom.
