

## Aircraft Performance - December Topic of the Month

A General Aviation Joint Steering Committee study of GA accidents suggested that pilots' unrealistic expectations of their aircraft's performance add risk to flight operations.

### Teaching Points:

- General aviation accidents continue to be associated with inaccurate or unreasonable expectations with regard to aircraft performance.
- Accidents occurring in the takeoff and initial climb phases of flight are likely to be fatal.
- Accurate prediction of aircraft performance is essential to dealing with power loss – particularly when power is lost during the takeoff and climb phases of flight.
