

# Pilot Transition Training and Inspection and Maintenance for LSA and Experimental Aircraft

Transition training is normally thought of when a pilot transitions to a higher performance, more complex aircraft. But, transition training works both ways. It can be equally challenging to transition from a high performance airplane to a lower performance craft. Learn how to train and safely operate that new to you airplane. How do you safely, properly and legally maintain and inspect a Light Sport or Amateur Built/Experimental airplane? We will look at the requirements as well as best practices for owner, operators and builders.

**Directions:** Meeting will be held in the airport terminal building on the northeast side of the airport.

## A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!
