

Grand Rapids FSDO FAASTeam presents:

Aging Aircraft Inspection and Maintenance - Cessna Aircraft Focus

Most aircraft operated today have far surpassed their design operating life. Manufacturers such as Cessna, Piper and Beechcraft never expected these aircraft to be operated beyond 50 years.

As a result, aging aircraft programs were developed to ensure safe continued operation.

Most people are unaware of these requirements because aging aircraft items are not normally inspected on an Annual Inspection. These special inspection items should be considered when owning or operating an old aircraft.

This 1 hour segment will focus mostly on Cessna aircraft and areas that are highly susceptible to fatigue wear and corrosion. It will review how to minimize the cost without compromising safety. It could be a useful tool for anyone considering buying and older aircraft.

Directions: The event will be held at the Terminal Building. Those flying-in should park in front of the terminal.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
