

Maintenance Placards / Engine Maintenance and Avoiding Maintenance Errors

Over the years, there have been a number of accidents involving aircraft following maintenance, sometimes with disastrous results. Problems include incomplete repairs or inoperative components that were not tagged during repairs. Dennis Miller will lead our discussion on resources for lock-and-tagging procedures for General Aviation aircraft. Marty King will cover engine maintenance best practices, common maintenance errors, and preventative maintenance versus supervised inspections and maintenance.

Directions: Aircraft flying in may park on the ramp in front of the Administration Building. Those driving in may park in the Administration Building parking lot (it is a short walk).

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
