

Enhanced Vision Systems

A significant number of general aviation fatalities could be avoided if pilots were better oriented with respect to their operational environments. Weather, night, smoke and other obstructions to vision can compromise safety, especially when operating close to the ground. Enhanced vision technology could lower the number of reduced visibility accidents among general aviation pilots.

Directions: Meeting will be held in the Airport Administration Building. Fly-in aircraft should park on the north side of the ramp, opposite the Administration Building.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
