

Loss of Control in the Airport Environment

Loss of Control events, especially during operations in the airport environment, are often fatal. There is minimal altitude, airspeed and time to effect a safe recovery. Unexpected events, engine failures, distractions and unstable approaches can contribute to a Loss of Control event. This seminar will look at ways to mitigate these causal factors and improve our chances of a safe flight.

Short discussion on the GAJSC Topic of the Month - Pilots and Medications

Directions: Meeting will be held in the FBO / Administration building.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
