

Gaming the System

A study of General Aviation controlled flight into terrain (CFIT) accidents found that a significant number of pilot fatality post-mortem examinations detected the presence of pre-existing medical conditions and/or prescription and over-the-counter medication use. A smaller number of cases revealed recreational drug use.

This seminar emphasizes the importance of disclosing a complete medical history, conditions and medication inventory to your medical examiner during the certification process, as well as performing a basic self-assessment before each flight.

The event will be held in the Terminal Building. Those driving in may park in the lot next to the Terminal Building. Those flying please park on the Ramp.
