

## Making the Numbers

The importance of understanding aircraft performance cannot be underestimated. Accurate prediction of aircraft performance is essential to dealing with power loss, particularly when power is lost during the takeoff and climb phases of flight.

This seminar looks at critical aircraft performance parameters and the importance of predicting and documenting that performance for your plane. This will be a 90 minute presentation.

Parking is available in the lot west of the Terminal Building. Those flying in may park on the east ramp opposite the Terminal.
