

## Making the Numbers

The importance of understanding aircraft performance cannot be underestimated. Accurate prediction of aircraft performance is essential to dealing with power loss, particularly when power is lost during the takeoff and climb phases of flight.

This seminar looks at critical aircraft performance parameters and the importance of predicting and documenting that performance for your plane.

This is a one and a half hour program.

The event will be held on the second floor of the Terminal Building. Those driving in may park in the lot next to the terminal. Those flying in may park on the ramp.

### A message from the National FAASTeam Manager
