

After-Market Safety Equipment

After-market safety equipment can significantly reduce the likelihood of some general aviation accidents. Such equipment includes angle of attack indicators, engine monitoring equipment, and enhanced and synthetic vision systems.

Reducing the regulatory burden on installation and certification of after-market safety equipment can result in increased use of such equipment and reduce the likelihood of general aviation accidents.

This is a 90 minute event.

Parking is available in the lot west of the terminal. Those flying in may park on the east ramp opposite the terminal.
