

## Vestibular Illusions

A significant number of fatal loss-of-control accidents in general aviation may have been caused by pilots responding inappropriately to illusions.

A basic understanding of how humans process information, sense and perceive stimuli can help pilots understand how they may be vulnerable to in-flight illusions. Education and training in coping in these situations can help improve pilot response and prevent loss of aircraft control.

This is a two hour seminar.

Parking is available in the lot west of the terminal. Those flying in may park on the east ramp opposite the terminal.
