

Vestibular Illusions

A significant number of fatal loss-of-control accidents in general aviation may have been caused by pilots responding inappropriately to illusions.

A basic understanding of how humans process information, sense and perceive stimuli can help pilots understand how they may be vulnerable to in-flight illusions. Education and training in coping in these situations can help improve pilot response and prevent loss of aircraft control.

This is a One and a Half hour seminar.

Parking is available on the south side of the terminal building. Those flying to the event may use the east ramp for parking.
