

## Stabilized Approach and Go-Around

Nearly 20% of fatal loss-of-control accidents occur during the approach phase of flight. Stabilized approaches are the foundation of successful landings. In this seminar, we will discuss the benefits of stabilized approaches and deciding when to go around if an approach becomes unstable.

This is a ninety-minute seminar.

Parking is available on the south side of the terminal building. Those flying to the event may use the east ramp for parking.

This is a ninety-minute seminar.
