

Safety Risk Management for GA Pilots

A study of Fatal General Aviation Loss of Control Accidents found that a significant number have identified human performance deficiencies that could be addressed through Safety Management Systems components. This presentation will help with understanding SRM components and process and application to General Aviation operations.

Upon entering the airport from county road 400N you will see a metal building on your left. Parking is in front of the metal building. Enter the front door of the building. The meeting will be through the first door on the right.
