

Understanding and Using Skew-T Diagrams (Green Bay IMC Club Monthly Meeting)

This month's meeting is a good activity for all pilots. Safe flying is a matter of mitigating risk, personal minimums and standard operating procedures. One of a pilot's most important considerations in making sound decisions is understanding weather conditions and anticipated changes.

Rich Mamrosh, an experienced aviation weather forecaster, will present skew-t diagrams, explaining and illustrating their usefulness to pilots. The meeting will also include a presentation on the WINGS program, with a hands-on demonstration of navigating the FAASafety.gov website. Attendees will learn how to identify and select the WINGS activities which provide greatest personal value.

Directions: Upper Level Meeting Area

A message from the National FAASafetyTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
