

FAASTeam presents:

NWS Skyward

Pilots have an inherent interest in weather, maintain awareness of sky conditions, and have experience from encountering various weather conditions. These attributes make aviators particularly valuable volunteers for the NWS SKYWARN program. SKYWARN® storm spotters form the nation's first line of defense against severe weather. In addition to serving the public as concerned citizens, pilot storm spotters receive training to deepen their own aviation knowledge. During SKYWARN training you will learn the following from a NWS meteorologist, along with further information on local area weather phenomena: Basics of thunderstorm development Fundamentals of storm structure Identifying potential severe weather features Information to report How to report information Basic severe weather safety A question and answer session will allow attendees to delve even further into weather-related issues pertinent to aviators. Prior to attending a safety seminar please review and abide by current CDC, State and Local health guidelines.

Directions: Follow signs to Green Bay Airport
