

Stall and Spin Avoidance

Every Pilot has been trained on stall recognition and Recovery of stalls then why are we seeing so many loss of control accidents?

Gordon Penner, a Master Flight Instructor in aerobatics and gliders, will explain life-saving stick and rudder techniques and practical discussion of stalls and spins as commonly covered in the emergency maneuver training (EMT) course. Understanding these simple principles will help you to avoid an unintentional stall and spin.

Our accident statistics show that pilots need to have both knowledge and skill in order to become safer pilots. In this webinar you will increase knowledge that you will then have to put in practice through more training.
