

## IMC Club Monthly Meeting EAA Chapter 766

This seminar is not meant as a lecture but rather an open discussion forum using real world scenarios to increase your level of safety in the IFR environment such as this scenario: **Trace Icing**. Ice is not nice – icing can affect flight operation in many ways. Air frame ice forms most commonly between +2 to -20 degrees C. Ice accretion can cause roll and pitch upsets due to wing and tail stalls without warning. Immediate escape is essential. The pilot must stay calm, work the checklist, Aviate, Navigate and Communicate with ATC. The Sheboygan Falls (WI) EAA 766 IMC Club provides organized “hangar flying” focused on building proficiency in instrument flying. An instrument rating is not required for attendance.

Aviation Heritage Center of Wisconsin Library,  
Sheboygan Municipal Airport.
