

The Possible Impossible Turn Engine Failure on Takeoff

Gordon Penner will lead the discussion on an engine fails shortly after takeoff, pilots face a critical decision: Attempt the "impossible turn" back to the runway or commit to landing straight ahead. This webinar examines the factors that make this maneuver possible versus impossible, including altitude requirements, distance from the runway, and aircraft performance considerations. Learn practical techniques for quickly assessing whether you have sufficient height and proximity to attempt the turn, plus step-by-step procedures for executing a safe return to the runway when conditions permit. We'll also cover proper decision-making for when landing ahead is the only viable option, helping you prepare for this high-stakes scenario before it happens.
