

Madison/Middleton EAA May VMC Club

This seminar is not meant as a lecture but rather an open discussion forum using real world scenarios to increase your level of safety in the IFR environment such as this scenario: Visual Flight Rules. Changing weather conditions require continuous updating and maintaining situational awareness. There are so many services available to get weather updates that make for a great discussion. Throughout these discussions we can learn from our fellow pilots past experiences that will make us safer pilots.

To ensure a safe flight your priorities as PIC are to Aviate, Navigate & Communicate. Safe instrument flying is a matter of mitigating risk, personal minimums and standard operating procedures.

We will be meeting in the Morey Airplane Company conference room. If driving in, enter through the main door off the parking lot. If flying in, enter through the main door off the ramp.

A message from the National FAASTeam Manager
