

Non-Towered Airport Flight Operations

Do you fly into non-towered airports, then this seminar is for You!

This discussion will be led by Steve Mesner, Certified Flight Instructor and FAA Safety Representative. As a group we'll take an in depth review of **FAA Advisory Circular 90-66C** which outlines recommended procedures and best practices for pilots operating at non-towered airports. We'll look at the regulatory and right-of-way requirements at non-towered airports. We'll review the standard traffic pattern including pattern entry and exit procedures, as well as recommended communication practices, and procedures for varying types of aircraft, including ultra-lights. This will be an open discussion format for all to participate in.

Please follow signs to the Mauston / New Lisbon Municipal Airport, New Lisbon, WI.

The event will be held as part of the EAA Chapter 1365 meeting.
