

VMC and IMC Scenario based Safety Discussion

VMC Question of the Month: Weight and balance calculations for light general aviation aircraft can be critical for ensuring flight safety. Aircraft-specific software applications available on the market today can make performing weight and balance calculations much easier and less prone to mistakes. Before using such a software application, what action must the pilot take?

IMC Question of the Month: Autopilot systems in general aviation aircraft can be a tremendous asset for managing the in-flight workload. However, they do require additional knowledge for safe operations. Besides the basic system operating procedures, what three items might be considered most important knowledge items regarding autopilot system operations?

These Discussions will be led by Timothy Meyer and Howard Kaney, FAA Safety Representatives.

EAA Chapter 1158 Hangar Main Meeting Room at the West Bend Municipal Airport, West Bend, WI.
