

North Star Flyers: Cutlass Systems Overview

Stepping up to a complex aircraft is a big move for many pilots but need not be mysterious or scary. This seminar will introduce the Cessna Cutlass RG to interested pilots, focusing on landing gear and constant-speed propeller operation. The type's safety record will be reviewed with emphasis on avoiding common errors.

Note: Space limitations require us to limit this seminar to members only. Please contact Jack Shelton via the FAAST team contact information if you would like this seminar presented in a different venue, or if as a non-member you would like to attend.

Directions: The meeting will be held in the classroom at Sim Flite Minnesota, in the first floor of the red and white hangar adjacent to RC Avionics at Anoka County Airport.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!
