

EAA Chapter 129 VMC Club Meeting

In-flight weather may differ significantly from the preflight forecast. ADS-B In gives pilots a tremendous amount of weather information, but safe use requires understanding what each product shows, how old it may be and what it cannot tell us.

This EAA Chapter 129 VMC Club presentation will examine FIS-B weather products, including NEXRAD, METARs, SPECIs, TAFs, PIREPs, AIRMETs, SIGMETs and Center Weather Advisories. We will discuss product age, update intervals, reception and display limitations, developing weather trends and cross-checking ADS-B information with other available sources.

A scenario-based discussion will challenge participants to evaluate graphical and textual weather information and decide when to continue, divert, turn around or land.

Whether driving or flying, park at Synergy Flight Center (FBO) and proceed to Hangar F15 which is located at the north end of the parking lot. It is the last hangar on the first row of T-hangars.
