

FAASTeam presents:

Engine Failure On Takeoff - THE IMPOSSIBLE TURN

Single-engine pilots... We have all heard about, studied, and practiced what's referred to as the "Impossible Turn." Do we land straight ahead... Are we able execute a 180° turn and land successfully on the runway surface of the airport from which we departed? What happens when we are 500' AGL... 300' AGL... Or... 75' AGL? Join us for a lively conversation on the not so uncommon but always unexpected "Engine Failure After Takeoff" to learn some tips, tricks, and techniques which are certain to help improve the outcome!

Directions: The program begins at 1800 Hours. Arrival at 1730 to network with like minded aviators and eat. Proceed directly to the room in the back of the facility.
*Prior to attending any safety seminar, please review and abide by current CDC, Federal, State, and Local health policies and guidelines.
