South Dakota FAASTeam presents:

Situational Awareness Safety Meeting

Topics to be discussed:Preflight: Flight planning, airspace, NOTAMS, weather briefings, use of websites, aircraft performance, airport layout, frequencies, emergency plan(s).Inflight: Single pilot resource management, communication, planning ahead. Postflight: NASA report (should a safety issue arise).Sioux Falls
(KFSD) Operations (Guest Speaker from the FSD ATC):
The three stages of situational awareness are:Information gathering.Understanding information.Anticipation.
Situational awareness can be defined simply as "knowing what is going on around us", or more technically – as "the perception of the elements in the environment within a volume of time and space". Situational Awareness influences our decision making and allows us to stay ahead of the aircraft. It helps us develop a mental picture of the world around us and use that mental picture to anticipate the future.
"Prior to attending a safety seminar or event, please review and abide by the current CDC, State, and Local Health guidelines."
Directions: Hangar area, after the pancake breakfast.

The FAA Safety Team (FAASTeam) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
