

Emergency Landings- Water vs Trees

In this event we will discuss misconceptions regarding consequences of both types of landings vs. statistical results. You may have to survive not only the landing but until rescued. Discussion will include how to maximize your chance of a survivable landing and successful rescue, important cold water factors and dunker training, considerations regarding high wing vs. low wing, tricycle gear vs. tailwheel, and gear/flaps up or down.

Meeting will be held in the Heritage Flight Museum.
