

Pro Tips on First Flights

The presentation covers areas of potential risk and risk mitigation for the first several flights of homebuilt aircraft, any aircraft that has undergone significant maintenance or a major alteration, and aircraft after completing an annual or condition inspection. Bjorkman draws on her experience as an Air Force flight test engineer, general aviation pilot and aircraft owner, and builder of an RV-8 to provide not just tips but real-world examples of what can go wrong from first and early flights during test programs.

Please enter through the main door and walk straight to the seminar room.
