

Preventative Maintenance, A Pilots Guide

There are many preventative maintenance tasks a pilot may perform. We will discuss the Regulations and review the maintenance functions a pilot may perform to a certificated aircraft. Do you know you can clean and gap your spark plugs, change a prefabricated fuel line, change your own tires? These are just a few of the preventative maintenance functions a pilot may perform. We will also review the pilots requirements for documenting the preventative maintenance performed.

Directions: Enter main entrance to Ravalli County Airport, stay on Airport Road to the Hangar Cafe.

A message from the National FAASTeam Manager

Over 136,600 pilots earned WINGS credits last year. Will you, this year?
