

FAASTeam presents:

Cold Weather Operations and Owner/Operator Maintenance and how to Log it Correctly

With the rapidly increasing cost of flying, particularly aircraft maintenance, what can you as a pilot do to reduce these costs? The FAA defines preventive maintenance as "...simple or minor preservation operations and the replacement of small standard parts not involving complex assembly operations." According to 14 CFR 43 Appendix A, pilots can accomplish the many items listed under "Preventive Maintenance" on their aircraft.

Attend this informative safety meeting and learn what you can do to reduce the cost of flying. Spend more money on fuel with the money you save on maintenance! Also, learn what changes are needed in your preflight such as checking weather reports and what survival gear to pack during the winter months!

Directions: Enter the front office of Leading Edge Aviation where you will be guided to the attached hangar.

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.

Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASafety Team) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
