

## Vernal Pilot Safety Meeting

There are way too many near misses and collisions on and near our airports. Let's get together and see what we can do to change the trend. We will review AC 90-66B Operating at an airport without a control tower. We'll discuss everything from preflight preparation for flying into a new airport to radio language you should use and how often.

Bring your device with ForeFlight so you can download the AC on your device and follow along on your device.

**Directions:** Meet in the Vernal Regional Airport Administration Building classroom.

### A message from the National FAASTeam Manager
