

## Aircraft Electrical Wiring Maintenance and Inspection

The satisfactory performance of any modern aircraft depends to a very great degree on the continuing reliability of electrical systems and subsystems. Improperly or carelessly installed or maintained wiring can be a source of both immediate and potential danger. The continued proper performance of electrical systems depends on the knowledge and technique of the mechanic who installs, inspects, and maintains the electrical system wires and cables. It is, therefore, important that maintenance be accomplished using the best techniques and practices to minimize the possibility of failure.

The building is located west across the street from the SLC-FSDO in Room #232.
