

# Mastering Visual Traffic Separation and Pattern Operations at Busy Airports

This WINGS seminar explores February's FAA Safety Team topic of the month: *Visual Traffic Separation and Collision Avoidance*. We'll apply these principles directly to busy traffic environments like KSVR and KTVY, focusing on practical techniques for maintaining safety and efficiency in busy patterns. From takeoff to landing, we'll break down spacing, speed management, pattern re-entry methods, and the smart use of tools like ADS-B and EFB traffic displays to enhance situational awareness.

Proceed through the vehicle gate into the parking lot on the south side of the facility. Enter the main doors from the south side.
