### **Summary:**

The General Aviation Joint Safety Committee (GAJSC) has determined that many accidents are the result of inaccurate and/or unreasonable expectations with regard to aircraft performance. Here, we'll see how the 4-H Club (hot, high, humid and heavy) conspire to greatly change aircraft performance.

We'll also remind ourselves how to predict aircraft performance, by using manufacturer's data and useful rules-of-thumb.

### **Learning Points:**

- General aviation accidents continue to be associated with inaccurate or unreasonable expectations about aircraft performance.
- The use of aircraft performance information is essential for every flight and in all flight regimes.
- Running the numbers isn't difficult and a "take-off and landing card" should be part of every pre-flight action plan.

**Join AOPA's Flying Clubs Lead and FAASTeam Lead Representative, Steve Bateman, for this month's 33-minute webinar on aviation safety education topics.**

**Please register here for the FAASTeam December 2023 Topic of the Month: Making The Numbers.**
