

A Survival Guide to Operations to Non-Towered Airport Flight Operations

Advisory Circular 90-66C clearly defines the procedures to be followed during Non-Towered Airport Flight Operations.....sort of. Understanding the risks and utilizing appropriate techniques at Non-Towered Airports can save your life and the lives of others. We will breakdown operational techniques described in AC 90-66C review some of the pro's and con's associated with their use. We will also discuss how to deal with a variety of aeronautical activity at a Non-Towered Airport.

Join us in the Mezzanine Classroom overlooking the Howard Hughes Spruce Goose. From the main entrance of the museum, use the curved stairway to your right to ascend to the Mezzanine. The classroom will be on your right at the top of the stairs. An elevator to the Mezzanine is available upon request.

A message from the National FAASafety Team Manager
