

## Huntsville IMC Club Meeting

### **Topic:** Unstable RPMs in IMC Flight

**Question of the Month:** How much does a change in aircraft weight affect stall speed? For example, if an aircraft with a maximum gross weight of 2,000 lbs stalls at 50 kts, how much would stall speed change (and in what direction) if it were at an actual weight of 1,800 lbs?

EAA/IMC Club, through the EAA's global Chapter structure, provides organized "hangar flying" focused on building instrument flying knowledge and skills. The program's network promotes a safety culture through continued education and believes that we develop safety and proficiency through education and real-life experience. Through the FAA Safety Program, aviation professionals provide informative WINGS presentations. You do not have to be an instrument-rated pilot to attend.

Executive Flight Center's conference room.
