

An Advisory Only Message Leads to Tragedy

Despite significant advancements in technology, pilot training, and newer, more advanced aircraft, approximately 80% of aviation accidents continue to be directly related to improper or inadequate pilot decision making. Failure to use checklists, using the incorrect checklist, pressure to make the flight, lack of knowledge, complacency, and loss of control are common human factors in accidents.

In this discussion, we will focus on human factors and how we can be better equipped to improve aviation safety.

From Dividend Drive, turn onto Falcon Drive. The FBO is located straight ahead.

For persons flying into the airport, contact the FBO to make any necessary arrangements.

A message from the National FAASTeam Manager
