

Loss of Control

As airplanes become more technologically advanced, pilots must become more vigilant against complacency in the aircraft. This meeting will focus on ways to prevent over reliance on aircraft systems, operation of advanced avionics, and how these tools can affect the way a pilot flies. In addition, we will discuss training tips and usage techniques to maximize the capabilities of aircraft systems while minimizing pilot complacency.

Directions: The meeting will be held in the bottom floor conference room.

A message from the National FAASTeam Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
