

January Topic of the Month-Interruptions and Distraction

In this presentation we'll discuss one aspect of Aeronautical Decision Making (ADM), dealing with distractions and interruptions, which are two hazards that we need to manage whenever we're walking, driving a vehicle, or flying a plane. We'll cite some statistics on distracted driving and discuss how distraction led to the loss of an airliner. We'll also talk about interruptions – a type of distraction that can be a significant hazard when it occurs in a critical operational phase. As usual, we'll offer some suggestions and best practices for dealing with distractions and interruptions

Directions: The event will be held on the ground floor conference room.
