

Flight Data and Performance Monitoring for General Aviation

The General Aviation Joint Steering Committee System/Component Failure work group contends that unreasonable expectations with respect to aircraft performance have contributed to fatal GA accidents. The GAJSC also feel that flight data and performance monitoring can help forecast system/component problems before they reach the point of failure. In this meeting we will discuss the safety benefits of Flight Data Monitoring (FDM), availability of FDM hardware, and FDM processes.

This meeting will be held at the EAA 242 SAC building at Jim Hamilton L B Owens Airport. There is gate access available in front of the building.
