

## May Safety Topic of the Month

Documented Return to service by the AMT after maintenance and the owner operator after preventive maintenance is required to keep the aircraft's Airworthiness Certificate valid. A valid Airworthiness is the authority a pilot to operate the airplane. When the maintenance activity is performed and completed by a maintenance technician or by the owner/operator are required to log in the maintenance record an entry stating the aircraft is returned to service. This action is necessary to enable pilots to carry out their responsibilities for the airworthiness of the aircraft they fly. This presentation will provide information of where and how to verify the Return to Service documentation that authorizes the pilot to legally operate the airplane.
