

September Topic of the Month - Safety Wire

Your airplane is only going to fly properly when it stays all together. As the saying goes, it is not a piece of junk flying in close formation! It is a complex machine dealing with a variety of stresses and strains in its operating environment, and preventative safety measures should be taken to protect against the adverse consequences of use, wear and tear. Among these measures are the use of safety wire, locking nuts, and castle nuts with cotter pins. All of these are addressed in this seminar. A number of accidents have important teaching lessons which will be discussed too.

Please register early for this FREE Seminar.

The Learning Center located on the upper part of the Airdrome.

Although the FAASTeam Seminar is FREE there is an admission fee for the Triple Tree Aerodrome. For admission fee information click on:
