

TOM Stabilized Approaches

A GAJSC study found that the second largest group of fatal loss of control accidents occurred during the approach phase of flight. Many of these accidents resulted from an un-stabilized approach or a failure to go-around. Thus, stabilized approaches are the foundation for successful landings. This interactive seminar will cover stabilized approach criteria, recognition when an approach becomes unstable and a review of go-around procedures for VFR and missed approach procedures for IFR operations.

This is a closed event for members of the Civil Air Patrol. For additional information contact Rep. Dan Ahern: ahern626@gmail.com or (843) 812-5421.
