

August Topic of the Month - Pre and Inflight Weather Resources

A study of selected General Aviation accidents identified inadequate or incomplete weather information as a common accident causal factor. This seminar is intended to inform GA pilots of available weather information products and technology and to suggest how to use those products to develop an accurate understanding of weather conditions.

We'll also review and discuss a weather related aircraft accident.

Once you enter the FBO, the multi-purpose room is located to the left.
